

TWIN BEANS

CURION

The Flexible Scenario

COMPLETE SOLUTION

For Medical Image Management

Professional, Flexible and Multi-tasking

CURION provides total integration, meaning all types of signal sources and imaging modalities with all sorts of medical equipment. CURION assists the doctors to enhance learning, helping the doctor to establish academic communication.

Simplify Management, Seamless Video, Integrated Recording

The seamless, intuitive image through the Video-over-IP system instantly route any image source to any destination, with no need to re-plug equipment. That system should be centrally managed for flexible growth. Record multiple video sources simultaneously, on the network-based application, in various combinations of formats and resolutions with high quality and in real-time. This is particularly beneficial with mobile devices, such as endoscopy trolleys, that are used among several ORs. Mediscena for viewing real-time surgery video and broadcast historical cases with a browser, enhance the sense of presence in education.

Upgrade Your Professional Platform

CURION integrates medical imaging, operating room monitoring, video, and audio. We are experienced in cooperating with the vendors of your medical equipment. CURION integrates any model from any supplier. CURION smoothly switches to adopt which medical image is needed, from sources including live video signals from endoscopes, ultrasound, light cameras, etc.

Designed for the Operating Room

There are certain projects that only customized solutions can perform as you need them to. With our customized solution you can tailor workflow perfectly for your professional field.

Hospital-Wide Application

CURION can also be applied to Gastroenterology departments, Neuroradiology departments, Cardiology departments, Neurology departments, Rehabilitation departments, Radiology departments, etc. performing image-guided procedures.

Flexible Video Switching

CURION offers a wide range of display modes and customized screen layouts, including switching to multiple monitors in full screen, picture-in-picture or multi-split (quad view or more than four).

Support for 3rd Party Accessories

User-focused integration allows for more accessories in the workflow. Record first-view surgical images with a head-mounted wireless camera in the procedure, or virtual glasses with left and right eye 3D image capture (supports Robotic Assisted Surgical Systems) before, during and after surgery.

Supports DICOM

CURION can receive DICOM worklists or upload data to hospital servers.

Communicate, Educate, Collaborate

CURION facilitates optimal collaboration and creates connectivity between procedure rooms, departments, and hospitals. Video can quickly be shared with the doctor. CURION can be used for viewing real-time surgery video and can broadcast historical cases with a browser. The Multi-task function can support Medical video conferences in full HD that can be held within the department as well as with the remote healthcare team. CURION can be used for virtual lectures by broadcasting from the procedure room to students in a seminar or to medical congresses.

For Inheriting Teaching, Training, And Knowledge

CURION supports live video streaming, with communication plus annotation and broadcast functions. Medical professionals can tag a significant phase in critical procedures. Utilizing these tags not only aids medical professionals find what they are looking for easily but can also be used to help safeguard patient privacy. With simple touch-panel control, it's ideal for showcasing surgical procedures to students and professors elsewhere in the hospital, or to conference delegates worldwide.

Video Editing and Rewind

CURION integrates video editing functions commonly used in clinical environments, such as trim, cut, the ability to create still images from the video, and adding annotations.

Multi-Task System

CURION can customized video re-layouts as picture-in-picture or multi-split (allowing customized video from multiple source screens, for use in your meeting room or classroom). CURION preset features different preset image modes for different departments. Of course, it can also follow the doctor's own preference setting, with a shortcut key to quickly switch the
